How to Perform a Home Energy Audit

Save money and help save the environment with a DIY home energy audit. Find where your home is losing energy and where you're losing money.

Find and Seal Air Leaks

- [ ] Buy an air leak detector: (Here's one for $24: https://goo.gl/Xy64ZI)
- [ ] Check floorboards
- [ ] Check windows
- [ ] Check doors
- [ ] Check the attic
- [ ] Check insulation R-value or thickness

Check heating and cooling equipment

- [ ] Change air conditioner filters
- [ ] Check ductwork for dirt streaks
- [ ] Insulate ducts and pipes that travel through unheated areas

Home Lighting

- [ ] Replace bulbs with CFL bulbs
- [ ] Instal or properly set dimmers
- [ ] Find ways to use more natural light

Appliances and electronics

- [ ] If possible upgrade to new energy efficient equipment
- [ ] Unplug electronics while not in use
