# How Alberto can share guide with Maggie

... in the short term. Will be improved later

- [ ] Alberto notes collection to be shared for Maggie

- [ ] Alberto adds guides into it

- [ ] Our backend code (Firebase Cloud Hosting/Functions) creates static html versions of the Guides in collection (similar to this one)

- [ ] Alberto grabs public link to created collection (associated with him) and shares with Maggie

- [ ] Guide usage is tracked and associated with Alberto's account

- [ ] Maggie can print the guide and use offline or use projector and share web page with guide to the team

- [ ] PROFIT!
