5 ways to train employees to avoid malware and viruses

There are many different ways that viruses and malware can make their way onto your computer. Businesses are especially at risk because of the amount of users present and utilizing the network. Running anti-virus software is rule number one for keeping computers clean, but there are other ways to train employees to keep their PCs free of malicious attacks.

◯ Do not click on a download button if it looks suspicious

◯ a browser that is secure. Gone are the days that Internet Explorer is considered secure enough to keep out viruses and malware.

◯ Never engage with cold calling IT agents

◯ Ignore pop ups

◯ Do not open email attachments from forwarded messages
