Here Andrew Lucas London provides useful tips for those who want to install the smart home system. What is necessary to take into consideration when choosing and installing a smart home system? <https://www.andrew-lucas.com>

- ☐ What does the owner need to know before buying an intelligent system? What issues does he solve in the course of installation? Of course, there will be a lot of questions: you need to choose the equipment, determine the necessary functions, the budget and many others. After combining desires and opportunities, you can start implementing plans. Here Andrew Lucas London provides useful tips for those who want to install the smart home system. What is necessary to take into consideration when choosing and installing a smart home system?

## Smart Home Design Project

- ☐ When making a request for the calculation of a smart home it is necessary to prepare a design project. The system manages a large number of devices, so at the stage of planning and designing it is necessary to determine the number of rooms, lighting groups, air conditioners, radiators and other devices. It will be easier to find the right system for you taking into account the parameters of your accommodation.

## Functions

- ☐ It is necessary to decide what you would like to have elements in the management system. To do this, think about simplifying and facilitating the use of a household appliance or part of the interior.

## Budget

- ☐ The price of an intelligent home system is directly dependent on the design of the panels, the functionality and the chosen model of the manufacturer. Also, the cost of the system is affected by equipment, which in most cases depends on the manufacturer.

## Options

- ☐ A unique home automation system allows not only achieving comfort, but also saving energy costs. You should choose which of them are essential for you or choose them all: 1. Maintaining of microclimate ideal for the owner of the house. 2. Controlling each object and you can even do that from a great distance. 3. The possibility of controlling every malfunction and sending data about the failure to the owner. This allows you to avoid short circuits and other troubles.
