Mistakes Every Beginner Programmer Makes

Writing Code Without Planning

☐ Always Think. Research. Plan. Write. Validate. Modify.

Underestimate The Code Quality

☐ Focus on readability Of the code.

Picking The First Solution

☐ Don't pick the first solution. Find the simplest solution to the problem.

Not Quitting

☐ No matter how much time you spend on a code, bad code needs to be discarded.

Not Googling

☐ Sometimes, googling will reveal what you need to do is not fix the problem but embrace it.

Not Using The Right Data Structures

☐ Learning pros and cons Of various data structures will help.

Making Existing Code Worse

☐ Always leave the code a bit cleaner than when you started to work with it.

Obsessing About Best Practices

☐ Stop worrying about best practices and focus on what you can do best.
