Annoying Web Design Problems

We compiled a list of the 7 most annoying web design problems to act as a sort of guide for what not to do when designing your website.

Site Isn’t Optimize For Mobiles

- [ ] Since Google released search update according to that Google gives less preference for rank to non-responsive sites; this is a major problem for those who generate leads online.

Poor Navigation

- [ ] When someone visits your site, do they know what to do? Where to go? What their next steps should be?
- [ ] It is better to give visitors some clear visual views about what your clickable buttons do and where they lead them.

Slow Load Time

- [ ] Slow loading time may frustrate your site visitors and affects conversion rate and brand perception.

Overused Stock Images and Icon

- [ ] If visitors see the same image on multiple sites, it losses trust.

Poor Use of Headers, Sidebars, and Footers

- [ ] People often cons that heading areas, footers, and sidebars are designed exclusively for advertisements. These areas can be much better utilized for additional navigation within the site.

Lackness of Top-Quality Content

- [ ] The number one ranking factor for the search engines has always been the quality of the content displayed on websites.

Not Keeping Website Update

- [ ] Keep themes and plugins fully updated are essential in modern times. It makes sure that every possible entry point is protected on your domain.
- [ ] Installing a real- time protection like Wordpress or iThemes is the best way for website security.
