5 Google Maps API Alternatives

Google Maps API is one of the most popular map APIs, used by all types of sites, services, businesses, and stores worldwide. But they are also expensive and lack customization options, making other mapping alternatives more appealing for many different companies and organizations. Check out 5 Google Maps API alternatives and their features.

Mapbox

- [ ] Fully customizable
- [ ] Outstanding performance
- [ ] Offline mode fully supported
- [ ] Open-source
- [ ] The longer learning curve for new developers
- [ ] It has a few map data limitations

Openstreet Map

- [ ] 100% free
- [ ] Constantly updated database
- [ ] It can't be used without a mapping service solution
- [ ] Limited data exchange volume

Tomtom

- [ ] High reputation when it comes to mapping and navigation
- [ ] Offers vectors maps, traffic density, location search, and route finding
- [ ] Price reduces with large volume requests
- [ ] API not constantly improved

OmsAnd

- [ ] Same core functionality as Google Maps
- [ ] Fully customizable
- [ ] Excellent offline usability
- [ ] Relies on Openstreet map to get map data

Leaflet

- [ ] Open-source API
- [ ] JavaScript data library
- [ ] Fully customizable
- [ ] Compatible with other mapping services
- [ ] Needs third-party services to support configuration
- [ ] Requires a developer (or developer skills) to use it

Storemapper

- [ ] An excellent API alternative
- [ ] Mobile-friendly
- [ ] Allows you to upload new locations information to your map easily
- [ ] Robust analytics dashboard that helps you track your map and location's performance
- [ ] Highly customizable and with free presets and settings included in every plan
